

KNOW YOUR GIN!

Here are some basics to assist you in your choice of gin.

GIN

It's a juniper-flavoured spirit made by adding approved natural flavouring to a neutral spirit. The lead flavour must be juniper.

DISTILLED GIN

The key to 'distilled gin' is re-distillation in stills, in the presence of juniper berries and other natural botanicals. The juniper taste is again predominant.

LONDON AND PLYMOUTH GIN

Defined with rather dull criteria to do with the ABV level (high), absence of any artificial ingredients or late additions of colour or flavours (good) and the level of sugar added at the end (very low, if any). The upshot?
A clean, dry flavour that makes for a great G&T.

BOTANICALS

Natural flavourings are referred to as 'botanicals'. Some gin makers keep their botanical blends a secret, some produce a gin with an 'out there' flavour, from rose to Christmas pudding.
